Sponsored by the
UPMC Heart and Vascular Institute at UPMC Passavant
and the University of Pittsburgh School of Medicine
Center for Continuing Education in the Health Sciences
OVERVIEW
This course will provide evaluation and critique of current and future standards of care in the treatment of the cardiovascular patient with respect to medical management and best practice guidelines for the primary care provider. It continues to focus on the new developments in cardiovascular imaging, appropriateness, and strategies to reduce patient readmission.

Each session will include a panel discussion and case studies.

Objectives
- Understand the options of percutaneous vs. surgical approaches for the treatment of aortic valve disease
- Identify and understand the use of new treatments and devices in the field of electrophysiology (associated with stroke prevention and rhythm management)
- Identify new approaches to treat heart failure and the use of big data for personalized management of patients
- Identify issues unique to women and cardiovascular disease
- Understand the assessment and management of aortic disease

Who Should Attend
This course is designed for the primary care providers, cardiologists, advanced practice providers, registered nurses, and other interested health care professionals.
